

Geometry

2007-2008 Mid-Year Course Evaluation

Teacher: Ms. Chou

INSTRUCTIONS: Please answer the following questions honestly and thoughtfully. Please type up your answers. Then, print out this document and give it to me during class.

1. Do you enjoy your time during class, or does the period sometimes seem to “just drag on?”
2. Do you feel as though you and your ideas are respected in this classroom? Is it OK to have a question about a mathematical topic? Are you comfortable expressing an idea even if you might be wrong?
3. What could your teacher improve upon? What would you like to change about the way class time is spent, or how assignments are made/given.
4. Do you enjoy working in groups, or would you rather the course be more of a lecture/take notes format?
5. With respect to working in groups, should Ms. Chou choose the groups from time to time, or should she allow students to choose their own groups?
6. Do you feel challenged in this course? Please let me know if you feel too challenged or not challenged enough.
7. Comment on the utility of homework assignments. Do they feel engaging or more like busy-work?
8. Do you feel comfortable seeking extra-help? If you did get help, how did you feel after leaving the help session?
9. Do you feel like your teacher is reasonably understanding of your needs as a student, and an approachable person to talk to when you need something?
